MONTHLY REPORT - SEPTEMBER 2023 | JAPAN EDITION

FOR PROFESSIONAL INVESTORS ONLY

## JGB curve steepens on higher growth and flexing of curve control

Bond market focus shifted to resilient growth in August, as yields rose. Similarities with the Goldilocks era are emerging as inflation cools, and growth recovers. If 3-6% rates are the new normal, income and carry may supplant duration as key factors. Longer JGBs lost the most, with 10-year yields not hitting the 1% cap yet.

### Macro and policy backdrop – Stronger Q2 growth boosted by net exports, and tourism

Exports led the Q2 growth, helped by a weak yen. Japan inflation remains above 3%, despite a recent slowdown. (pages 2-3)

### Yields, curves and spreads – Yields, and curves start to resemble the Goldilocks era of 2002-06

Some signs of dis-inversion as longer yields rise, and markets begin to adjust to a new era of higher rates? (pages 4-5)

### Sovereign and climate bonds – JGB underperformance, after curve control eases, may weigh on sovereign greenium

Increased country weights for longer duration sovereign bond markets, notably Japan and UK, key to spread moves. (page 6)

### Performance – Longer duration sovereigns fell in August, apart from China and EM bonds, but short bonds gained

Duration proved the enemy again in August, as curves dis-inverted, and long ends re-priced to higher policy rates. (pages 7-8)

### Appendix (from page 10)

Global bond market returns, historical bond yields, bond market durations and market values and foreign exchange returns.

Chart 1: German & US breakevens fell with inflation, but yields rose on stronger growth. JGBs stabilised after initial dip on curve control flex.

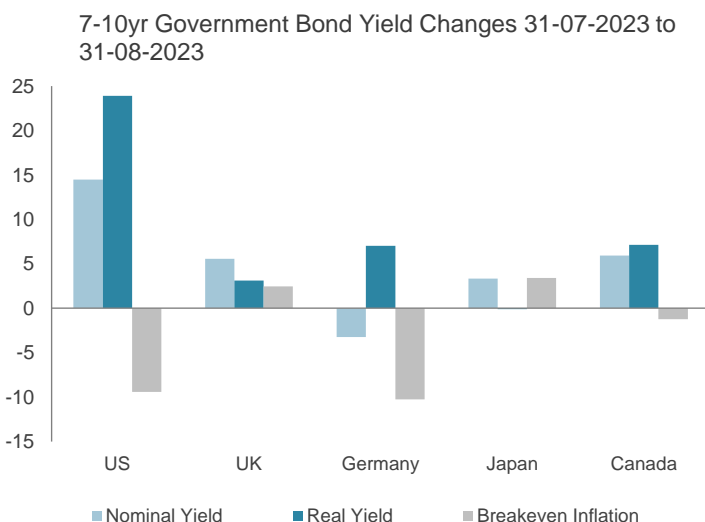

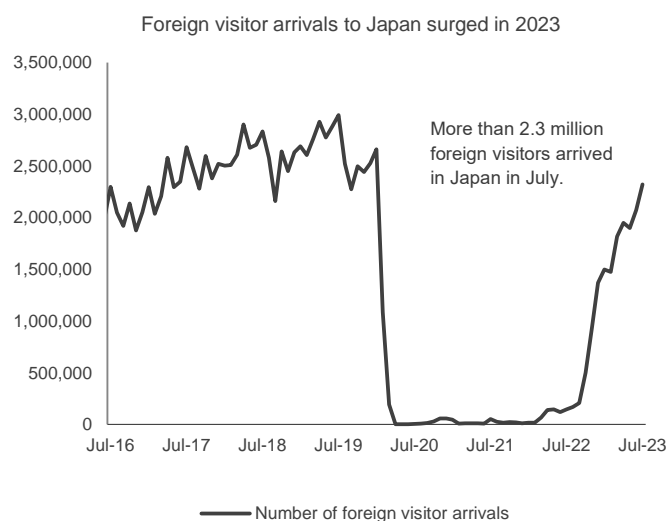

Chart 2: The number of foreign visitors to Japan recovered quickly in 2023, but visitors from China lagged most.

# Macroeconomic Backdrop – Growth and Inflation Expectations

Global growth has withstood higher rates in 2022-23, without recessions (apart from a mild Eurozone version) helped by buoyant consumer spending. Japanese forecasts were upgraded after stronger-than-expected Q2 growth, driven by net exports (but not consumption). Chinese deflation risks rose as property sector woes, and consumer caution, continue.

G7 recessions have disappeared from 2023 Consensus Forecasts, after strong Q2 GDP readings, as Chart 1 shows. Japan's economy expanded strongly in Q2, at 6% annualised, helped by strong exports, despite weaker consumer spending. 2023 growth forecasts for Japan increased, boosted by stronger-than-expected Q2 growth.

Chart 2 shows steep disinflation in Q2 2023, helped by y/y base effects, but base effects deteriorate in Q3. Japan's core CPI rose 3.1% y/y in July, driven by consumer spending and recovering tourism, but slower than the 3.3% June. However, note that price increases y/y excluding fresh food and energy rebounded to 4.3% in July, a level last seen in May.

Japan's labour market tightness may have peaked, judged by the unemployment rate of 2.7% in July vs 2.5% in June. Japan's total cash earnings y/y growth slowed to 2.3% in June, adding pressures on the BoJ's attempt to meet the inflation target sustainably. A looser labour market doesn't bode well for wage growth, which is watched closely by the central bank to decide on policy (Chart 3).

Japan's 10s/2s yield curve steepened in August, with a sharper increase in 10-year yields, following the BoJ decision to raise the 10-year yield cap. Short term yields also rose, approaching a zero rate (Chart 4). Japan's 10s/2s curve has some scope to steepen further, given the current 10-year yield level at 0.6+% is well below the yield cap of 1% set by the BoJ.

Chart 1: Consensus G7 GDP forecasts show no recessions in 2023-24. Japan's growth forecasts of 2023 were upgraded most significantly, after a strong growth in Q2 - 6% annualised.

Latest Consensus Real GDP Forecasts (% , August 2023)			
	2022	2023	2024
US	2.1	1.9	0.9
UK	4.1	0.3	0.5
Eurozone	3.3	0.6	0.9
Japan	1.6	1.8	0.9
China	3.0	5.5	4.8
Canada	3.5	1.3	1.0

Chart 2: July inflation data generally showed a modest uptick, as base effects turned less favourable. Japan inflation, excluding fresh food, slowed to 3.1% in July from 3.3% y/y.

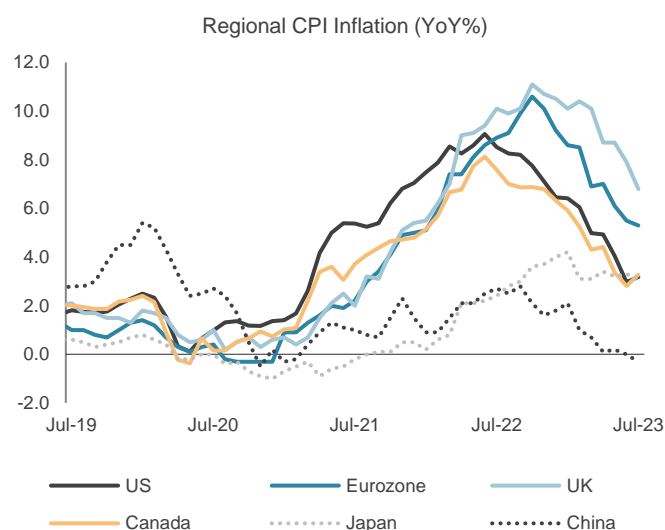

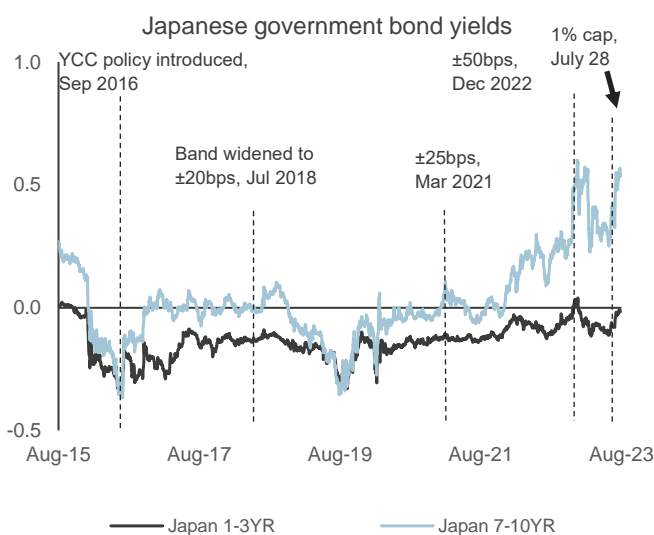

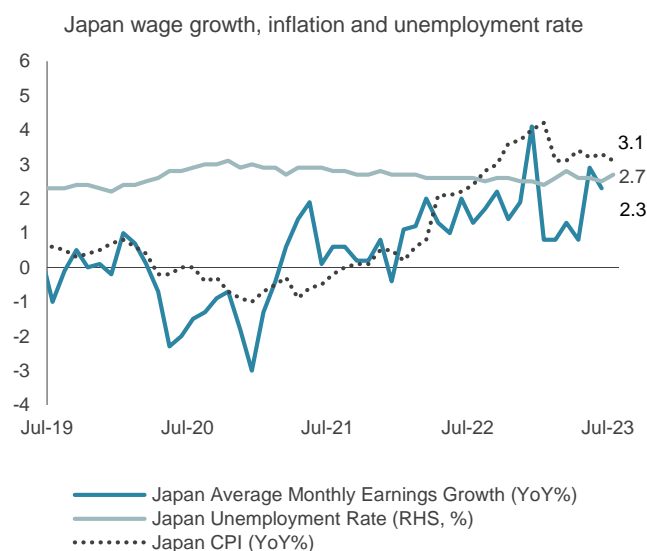

Chart 3: Japan's wage growth lost momentum in June, coupled with lower inflation. Labour market tightness in Japan may have peaked cyclically, judged by higher unemployment in July.

Chart 4: Japan's 10s/2s yield curve steepened in August, after the BoJ effectively lifted the 10-yr yield ceiling to 1% on July 28. But the yield curve control (YCC) regime remains in place.

# Financial Conditions and Monetary Policy Settings

G7 central banks, ex BoJ, have tightened financial conditions by raising rates since March 2022, but the tightening is not severe, particularly given accommodative starting conditions. Currency moves reflect rate differentials with the yen and renminbi weakest. The BoJ's balance sheet continued to grow, unlike other G7, although at a slower pace.

Japan's money supply growth y/y fell to 2.4% in July (Chart 1), the lowest in recent four years, countering accommodative financial conditions. But the offsetting effect is modest for the time being, given the positively sloped and steepening yield curve, retention of a negative short rate target, weaker yen, and capped 10-year yields of JGBs. (Chart 4 shows the BoJ's balance sheet expansion.)

Interest rate differentials and policy settings have dominated FX movements in 2023 (Chart 2). Both the renminbi and yen fell back in August, after further policy easing by the PBoC, and after the initial yen rally on the easing of curve control evaporated, and more yen carry trades were implemented. The US dollar rallied across the board as the Fed refused to rule out further tightening.

G7 central banks left options open to tighten policy again, if needed, after the August moves, as the stronger pass-through of wage increases to service sector inflation is a challenge, given tight labour markets. The BoE's policy challenge is the most acute with inflation still close to 7% y/y. The BoJ retained short rates of -0.1%, and China cut policy rates again in August (Chart 3).

The Bank of Japan bought an additional 4 trillion yen of Japanese government bonds in August, a reduction from a purchase of 7.3 trillion in July, as a result of easing its curve control policy since July 28. Japan's expanding balance sheet remains in stark contrast to shrinking balance sheets elsewhere in the G7 (Chart 4).

Chart 1: Japan's M2 growth hit the lowest in 4 years, but relatively loose financial conditions remain, helped by other key factors. It also raises some doubts about the sustainability of 2%+ inflation.

Chart 2: Currencies have been strongly correlated with interest rate differentials in 2023, with yen and renminbi the weakest vs USD. The yen's rally after the flexing of YCC proved short-lived.

Chart 3: Central banks, excl. the BoJ and PBoC, remain reluctant to rule out more rate rises, as they seek to recover low inflation regimes, even if this increases the risk of doing too much, too late.

Chart 4: The BoJ was building up its balance sheet at a slower pace in August, relatively to July, as less JGBs buying was required to support a higher yield level.

# Global Yields, Curves and Spread Analysis

Chart 1: G7 7-10-year yields have trended higher in August, as markets price in the prospect of higher rates for longer, despite lower Q3 inflation. JGB yields increased as curve control was eased.

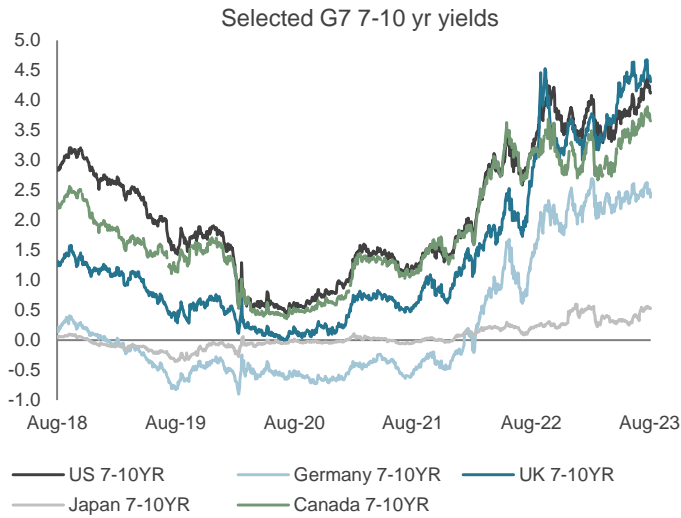

Chart 2: Real yields edged higher in August, as real growth proved resilient, and central banks signaled no early respite on rates. UK lower inflation helped linkers but wage inflation remains a key issue.

Chart 3: Yield curves dis-inverted somewhat, as longer yields rose. This may suggest markets are adjusting further to the end of zero rates. The JGB curve steepened on BoJ flexing of curve control.

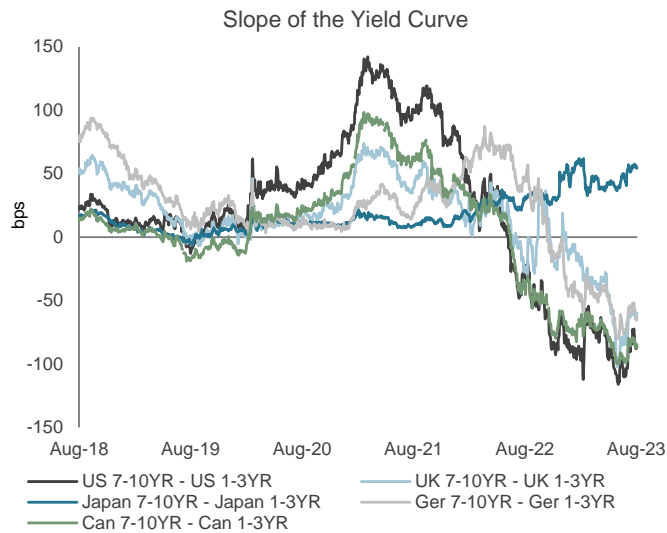

Chart 4: Long end yields also rose, as investor concerns about re-investment risk eased, on the view yields may now have entered higher trading ranges. However, curves remain inverted, ex JGBs.

Chart 5: Germany and US led breakevens lower in August, as real yields rose more than nominals, followed by Canada. Japan and the UK breakevens edged higher.

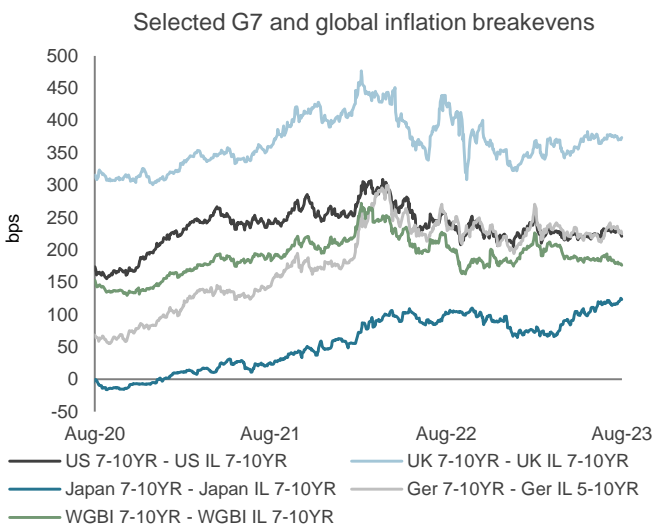

Chart 6: Overall, global inflation breakevens of all tenors remain stable around 2%, after a period of higher short-dated breakevens, with little evidence of inflation expectations de-stabilising.

Source: FTSE Russell and Refinitiv. All data as of August 31, 2023. Past performance is no guarantee of future results. Please see the end for important legal disclosures. Bond market data is derived from FTSE Fixed Income Indices. See Appendix Glossary for list of indices used for each market. For professional investors only.

# Yield Spread and Credit Spread Analysis

Chart 1: Treasuries led global yields higher in August, spooked by stronger Q3 US growth, with spreads widening accordingly. Apart from JGBs and gilts, Treasuries are returning to pre-Covid spreads.

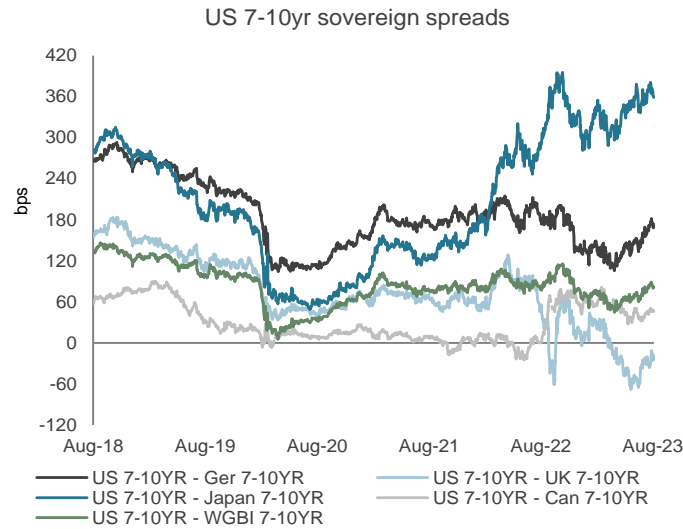

Chart 2: Italian sovereign spreads fell further in August, extending the decline of recent months, helped by increased foreign investment, and the continuing decline in the debt/GDP ratio.

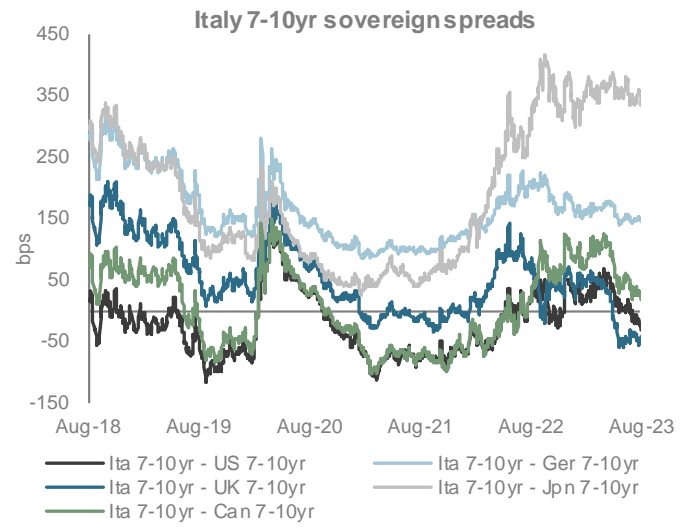

Chart 3: EM sovereign spreads remain near multi-year lows, reflecting EM success in early counter-inflation measures in 2021-22, and QE support during the initial Covid crisis in 2020.

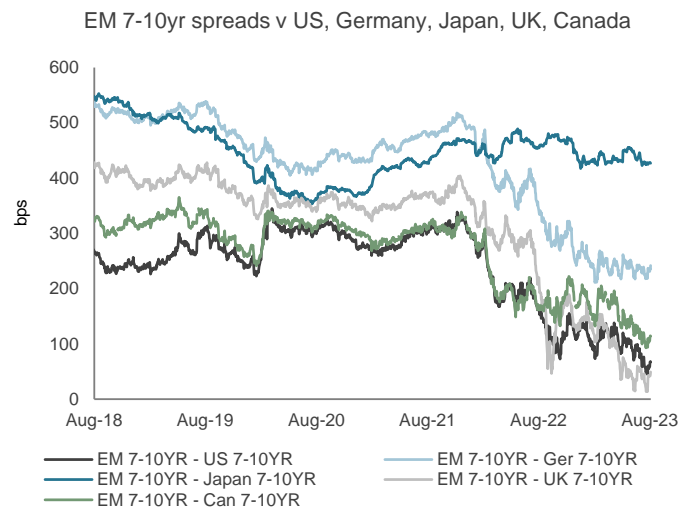

Chart 4: China's strong negative correlation with G7 yields continues, as concern about debt-deflation drove Chinese yields lower in August, while stronger growth drove G7 yields higher.

Chart 5: US high yield (HY) outperformed in August, as spreads tightened, while Eurozone HY spreads flatlined. Closer correlation of IG credit with gov't bonds has meant more stable IG spreads.

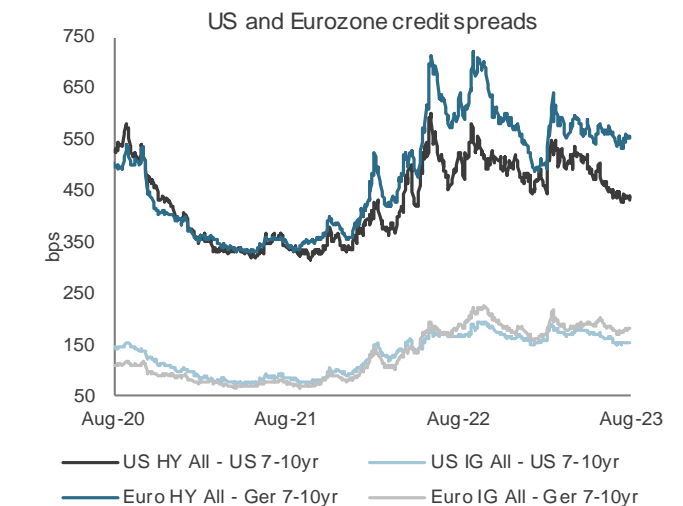

Chart 6: Chinese \$ HY spreads surged back to November highs, completely reversing the Q1 tightening. Widening spreads didn't reflect the easier mortgage policies unveiled by the PBoC.

Source: FTSE Russell and Refinitiv. All data as of August 31, 2023. Past performance is no guarantee of future results. Please see the end for important legal disclosures. Bond market data is derived from FTSE Fixed Income Indices. See Appendix Glossary for list of indices. For professional investors only.

# Sovereign and Climate Bonds Analysis

Chart 1: Climate WGBI outperformed WGBI during the years of very low yields, helped by extra duration, but this reversed in 2022, when duration squeezed returns hard. This has stabilized in 2023.

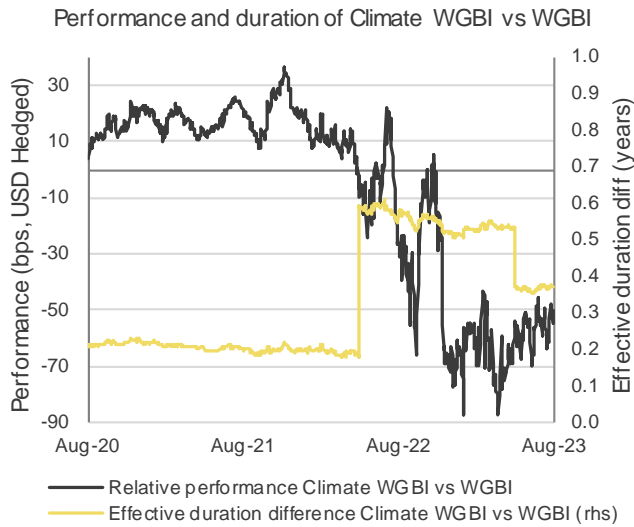

Chart 2: US underweight in the Climate WGBI fell in July's re-weighting, reducing the duration difference vs WGBI. China's 15% underweight prevented lower Chinese yields impacting significantly.

Chart 3: Climate WGBI yields remain below WGBI, though the differential narrowed after the increase in JGB yields since curve control was eased, due to Japan's high weight in the climate WGBI.

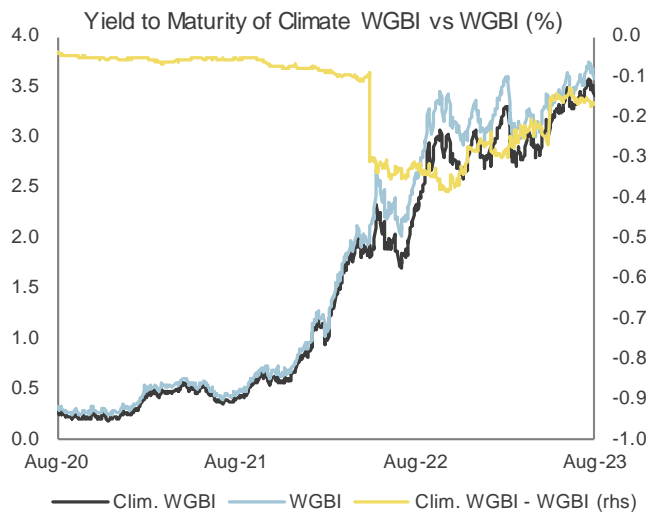

Chart 4: Climate WGBI's higher weighting in the Eurozone gives the index higher AAA weight, with Bunds rated AAA, but the lower US weighting in climate WGBI means the AA weight is notably lower.

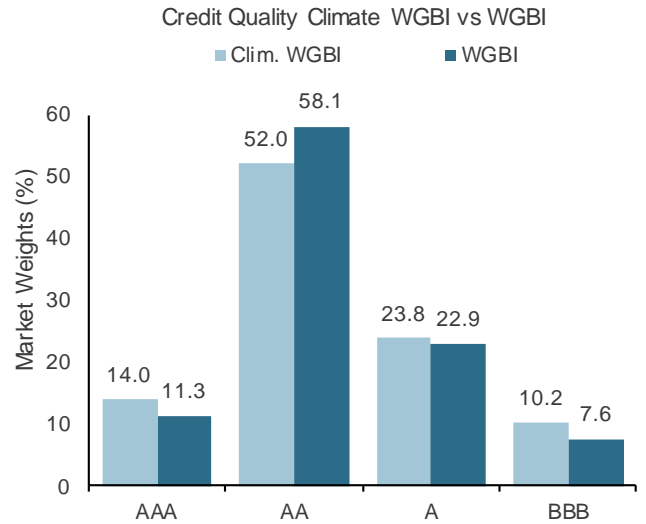

Chart 5: Although curves dis-inverted a little in August, with longer yields rising, yields remain close to 3% in both WGBI and climate WGBI in 2023, eliminating most of the "greenium" in climate WGBI.

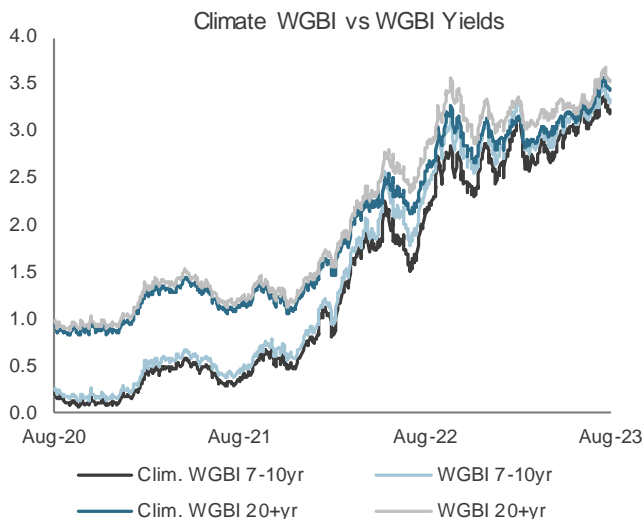

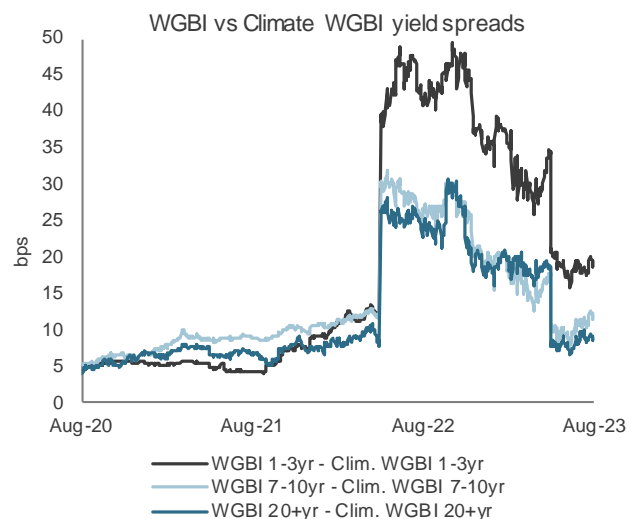

Chart 6: The "greenium" or yield discount on climate-WGBI increased when Japan's weight increased, and the US fell, in 2022. But this may unwind further as BoJ curve control is eased.

# Global Sovereign Bond Returns – 1M and YTD % (JPY & LCY, TR) as of August 31, 2023

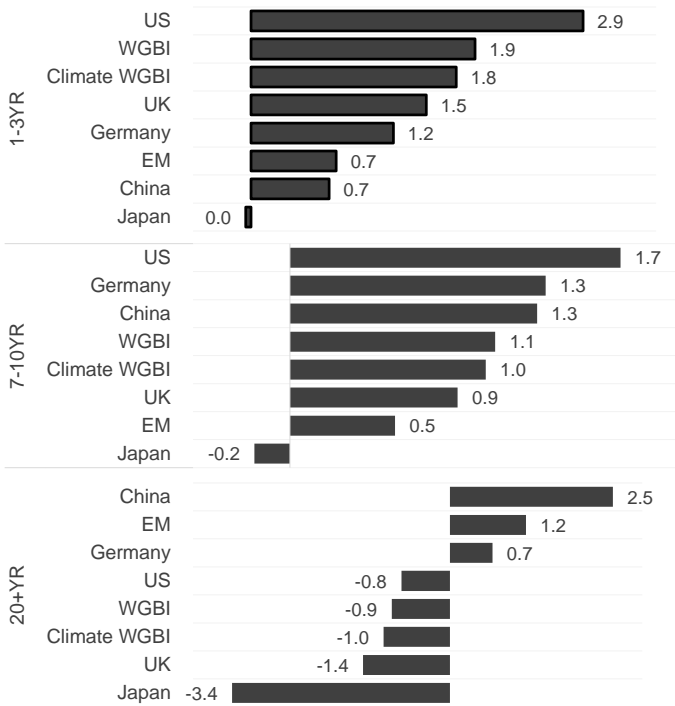

Longer duration sovereign bonds fell most in August, with only China and short US Treasuries resisting the trend. JGBs were weakest, losing up to 3.4%. Gilts underperformed YTD, losing 2-9% in longs. However, gilts made significant YTD returns in JPY terms (6-17%), driven by a weaker yen, and sterling strength, despite some retreat in 20+year in August.

Shorter-dated government bonds delivered positive returns in August, led by the UK and US, but China and EM outperformed in longs. JGBs underperformed across the curve, with the deepest losses of 3.4% in longs in August. A weaker yen helped overseas bond returns in yen terms, as currency movements in 2023 show high correlation with interest rate differentials.

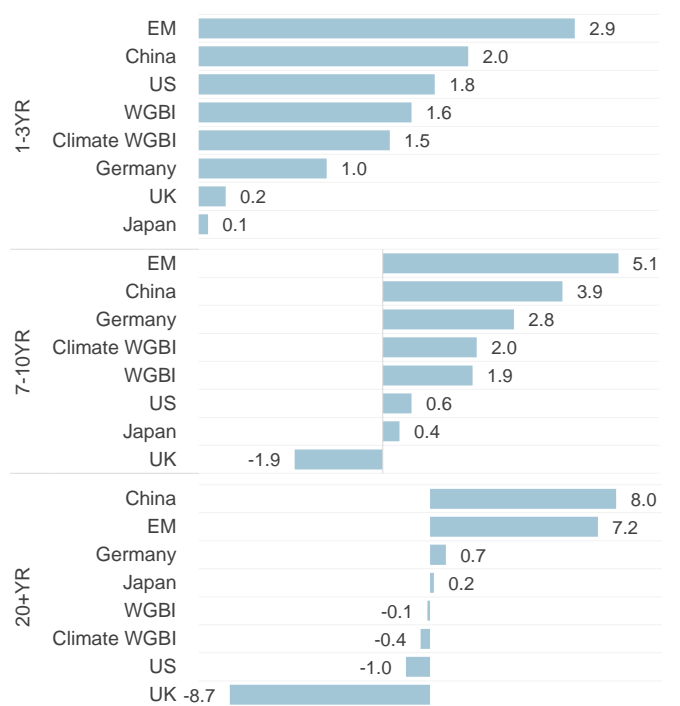

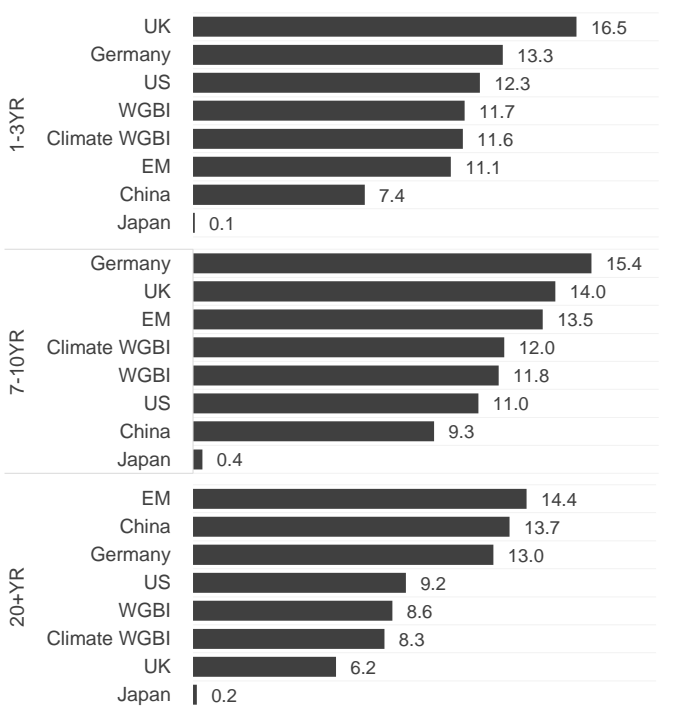

Further PBoC easing and weak growth drove positive returns of long Chinese government bonds in August, to 2.5%. The renminbi depreciated less than yen, against the US dollar, boosting returns in yen terms. YTD, shorter-dated gilts and German Bunds outperformed in yen terms, with sterling and euro strength.

## CONVENTIONAL GOVT BONDS

1M JPY 1M LCY

YTD JPY YTD LCY

## Top and Bottom Bond Returns – 1M & 12M % (JPY, TR) as of August 31, 2023

Shorter US Treasuries, US HY, and longer Chinese government bonds were the strongest performers in August, in yen terms, returning about 2.5-2.9%. Longer inflation-linked bonds fell broadly, as stronger growth boosted real yields. 12M returns, in yen terms, were led by EM and Italian bonds, with returns of 14-25%, helped by stronger currencies.

US bonds outperformed, helped by the stronger US dollar in August. Australasian bonds lost up to 3% on weaker commodity currencies. Swedish government bonds were also among the worst performers in August, when the Swedish krona depreciated.

On 12M, EM inflation linked returned 21-25%, continuing the outperformance in 2022-23, after some losses in August. Eurozone government and corporate bonds benefited from the stronger euro, returning up to 22%, led by Euro HY and Italian sovereigns (despite higher ECB rates). Longer UK conventional and inflation-linked bonds lost most, with the bulk of the losses in 2022.

FTSE International Limited is authorised and regulated by the Financial Conduct Authority as a benchmark administrator.

All information is provided for information purposes only. All information and data contained in this publication is obtained by the LSE Group, from sources believed by it to be accurate and reliable. Because of the possibility of human and mechanical error as well as other factors, however, such information and data is provided "as is" without warranty of any kind. No member of the LSE Group nor their respective directors, officers, employees, partners or licensors make any claim, prediction, warranty or representation whatsoever, expressly or impliedly, either as to the accuracy, timeliness, completeness, merchantability of any information or of results to be obtained from the use of FTSE Russell products, including but not limited to indexes, data and analytics, or the fitness or suitability of the FTSE Russell products for any particular purpose to which they might be put. Any representation of historical data accessible through FTSE Russell products is provided for information purposes only and is not a reliable indicator of future performance.

No responsibility or liability can be accepted by any member of the LSE Group nor their respective directors, officers, employees, partners or licensors for (a) any loss or damage in whole or in part caused by, resulting from, or relating to any error (negligent or otherwise) or other circumstance involved in procuring, collecting, compiling, interpreting, analysing, editing, transcribing, transmitting, communicating or delivering any such information or data or from use of this document or links to this document or (b) any direct, indirect, special, consequential or incidental damages whatsoever, even if any member of the LSE Group is advised in advance of the possibility of such damages, resulting from the use of, or inability to use, such information.

No member of the LSE Group nor their respective directors, officers, employees, partners or licensors provide investment advice and nothing in this document should be taken as constituting financial or investment advice. No member of the LSE Group nor their respective directors, officers, employees, partners or licensors make any representation regarding the advisability of investing in any asset or whether such investment creates any legal or compliance risks for the investor. A decision to invest in any such asset should not be made in reliance on any information herein. Indexes cannot be invested in directly. Inclusion of an asset in an index is not a recommendation to buy, sell or hold that asset nor confirmation that any particular investor may lawfully buy, sell or hold the asset or an index containing the asset. The general information contained in this publication should not be acted upon without obtaining specific legal, tax, and investment advice from a licensed professional.

The information contained in this report should not be considered "research" as defined in recital 28 of the Commission Delegated Directive (EU) 2017/593 of 7 April 2016 supplementing Directive 2014/65/EU of the European Parliament and of the Council ("MiFID II") and is provided for no fee.

Past performance is no guarantee of future results. Charts and graphs are provided for illustrative purposes only. Index returns shown may not represent the results of the actual trading of investable assets. Certain returns shown may reflect back-tested performance. All performance presented prior to the index inception date is back-tested performance. Back-tested performance is not actual performance, but is hypothetical. The back-test calculations are based on the same methodology that was in effect when the index was officially launched. However, back-tested data may reflect the application of the index methodology with the benefit of hindsight, and the historic calculations of an index may change from month to month based on revisions to the underlying economic data used in the calculation of the index.

This document may contain forward-looking assessments. These are based upon a number of assumptions concerning future conditions that ultimately may prove to be inaccurate. Such forward-looking assessments are subject to risks and uncertainties and may be affected by various factors that may cause actual results to differ materially. No member of the LSE Group nor their licensors assume any duty to and do not undertake to update forward-looking assessments.

No part of this information may be reproduced, stored in a retrieval system or transmitted in any form or by any means, electronic, mechanical, photocopying, recording or otherwise, without prior written permission of the applicable member of the LSE Group. Use and distribution of the LSE Group data requires a licence from FTSE, Russell, FTSE Canada, FTSE FI, FTSE FI Europe, YB, BR and/or their respective licensors.
